## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Ohizumi et al (US 6,979,115).

Regarding claim 1, Ohizumi et al ('115) discloses a lighting clip (figure 1) fixed on a portion of an edge of a transparent or semi-transparent panel (12) in a removable or permanent way, and supplied by an electric power system (inherent feature of a light source) said clip (15) comprising one open side (see figure 5), a first clamping arm (15) and a second clamping arm (15d), a connector joining said clamping arms (figure 5), and an internal space wherein at least one source of light (13) is placed in the internal space (figure 6), which source of light illuminates a portion of the panel and wherein the clip is in form of an elastic (column 3, lines 5-24), self-supporting shape (figure 5), the clamping arms are completely linear (figure 5), and the first clamping arm is diagonal to an external surface of the panel (figure 5).

Regarding claim 2, the clip, according to Claim 1, wherein the clamping arms are of different lengths is shown in figure 6.

Regarding claim 5, Ohizumi et al discloses a lighting clip (figure 1) fixed on a portion of an edge of a transparent or semi-transparent panel (12) in a removable or permanent way, and supplied by an electric power system (inherent feature of a light source), said clip comprising one open side (figure 5), a first clamping arm (15) and a second clamping arm (15d), a connector joining said clamping arms (figure 5), and an internal space wherein at least one source of light (13) is placed in the internal space, which source of light illuminates a portion of the panel and wherein the clip is in form of an elastic (column 3, lines 5-24), self-supporting shape and the clamping arms are completely parallel to each other is shown in figure 5.

### ***Allowable Subject Matter***

Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: Regarding claim 3, the clip, according to Claim 1, the prior art does not teach the clamping arms are of equal length, ***and both arms are diagonal to a surface of the panel.***

.

***Response to Arguments***

Applicant's arguments, see pages 1-3, filed July 28, 2009, with respect to the rejection(s) of claim(s) 1-3 and 5 under 103 (a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Ohizumi et al.
